

Enterprise-wide Risk Management

This section presents the key building blocks of our risk management framework: a schematic representation of our risk management process based on the COSO model, a summary table that categorizes the main risks related to Sienna Investment Managers activities (including the various factors and mitigation measures), and an illustrative risk mapping.

Risk Management and Internal Control

The Board of Directors is responsible for assessing the risks inherent to Sienna Investment Managers and the effectiveness of the internal control system. With regards to risk management and internal control, the applicable legislative framework consists of the law of July 12, 2013 (application of European Directive 2011/61/EU on Alternative Investment Fund Managers) and the Circular CSSF 18/698 (the so-called “Corporate Governance” circular). Besides, the IFRS 7 standard defines additional requirements for the management of risks related to financial instruments. Since its creation, Sienna Investment Managers has formalized its internal control and risk management system based on the COSO model.

The COSO methodology is based on five areas: the control environment, risk assessment, control activities, information and communication, and supervision and monitoring.

Risk Management Process

As part of its enterprise-wide risk management framework, Sienna Investment Managers considers the implemented Risk Management Process below as a dynamical process that develops itself constantly rather than a static structure.

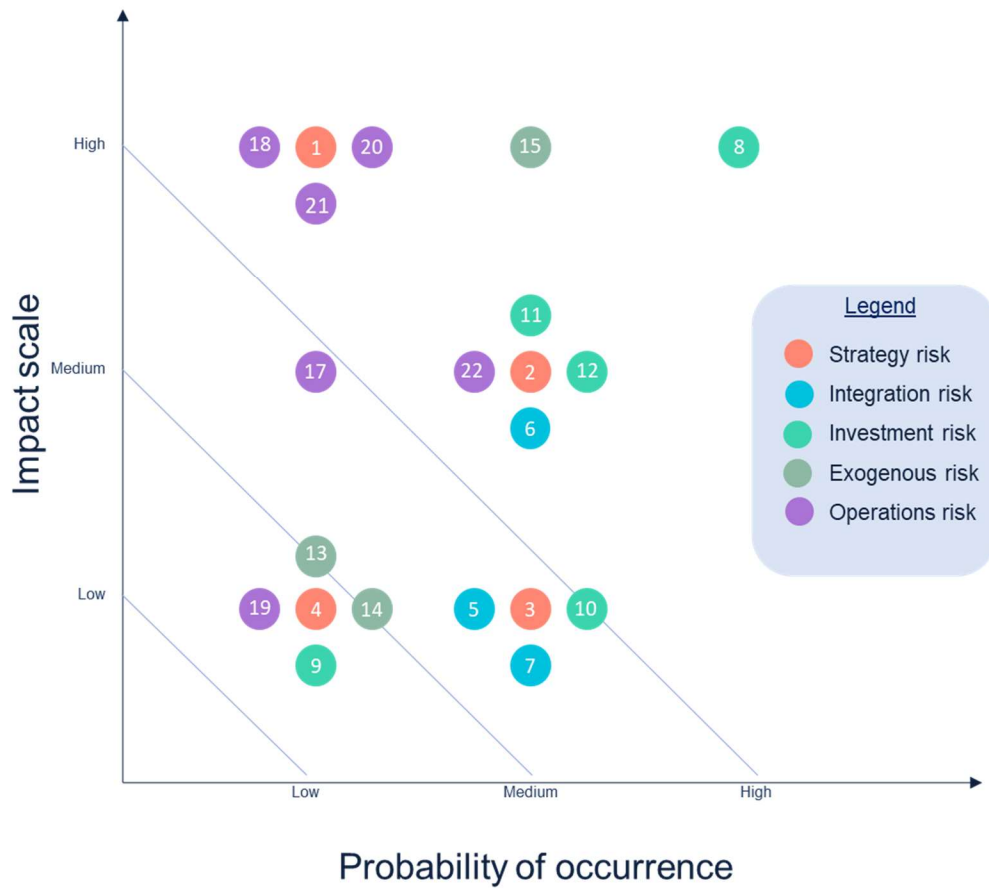

Overview of main risks and mitigation measures

Main risks	Risk factors	Mitigants
<p>Strategy</p> <p>Risks resulting from the definition and continuance of the group's guidelines and strategic developments</p>	<ul style="list-style-type: none"> • Differing visions or understanding of the assessment of strategic priorities and inherent risks • Misalignment between target and investment philosophy • Validity of the parameters underlying investment thesis • Incomplete/inaccurate information when performing the investment due diligence 	<ul style="list-style-type: none"> • Formal decision-making process involving all governance bodies and the management • Ongoing monitoring of key performance indicators and regular updates of assumptions and forecasts • Periodic review of industry trends
